I have directed SET Environmental to remove and dispose of the wastewater collected by the COH on the initial response. All TCEQ frak tanks are full. SET got it profiled off the sample we took and should be handling disposal today. Estimated cost of disposal is about \$ 4,100 for the estimated 7,000 gallons.

With regards to the remaining questions, I assumed TCEQ would be handling as a result of the clean up. If there not, let me know .

Have a great weekend!

Steve/Sharon

I was wondering if you and Nicole ever worked out the following:

1. Disposal of the water SET collected for you;
2. Removal of the dike that SET placed in the ditch on Kingsbury;
3. Restoration of the property (COH right-of-way). We took soil samples in that ROW ditch and in the heavily stained areas and will get results back Tuesday or Wednesday (further work may be needed on the COH ditch and the other stained areas).

Let me know if you have questions.

Gary
